

De-shedding:

All dog breeds shed old hair to allow new to grow. Some breeds it is very little and not often noticed. Dogs are supposed to shed in the spring to lose their winter coats. However with our climate and the fact that most of our dogs spend a lot of time indoors, our dogs cannot register the season change and will shed all year round.

It is impossible to stop or prevent your dog shedding but regular brushing will help. Our dryers and de-shedding tools at Black Nose Grooming will help loosen and remove all dead hair, making your dog feel wonderful.
